

PocketBible® for Windows Mobile™ Smartphone

Introduction

PocketBible for your Windows Mobile Smartphone allows you to read and study the Bible whenever and wherever you have your phone! This guide introduces PocketBible and its many helpful features.

If you're in a hurry to get started, start at the Quick Start Guide, which introduces the important concepts that you'll need to know.

- [Getting Started](#) - installing and launching PocketBible
- [Quick Start Guide](#) - a quick introduction to the important concepts of PocketBible
- [Navigation](#) - a detailed look at navigation
- [GoTo](#) - a detailed look at the GoTo Form

- [Copyrights and Trademarks](#) - the small print

Getting Started

Installation

PocketBible consists of:

- The PocketBible application, used to read one or more installed Bibles, and
- One or more installed Bibles.

You must have PocketBible and at least one Bible installed in order to use PocketBible. To install PocketBible or a PocketBible Bible:

- Connect your Windows Mobile Smartphone to your Windows PC.
- Verify that ActiveSync is running and shows your phone as connected.
- Start the PocketBible or PocketBible Bible installation program.
- Follow the on-screen instructions.

Important note: your Smartphone contains volatile and non-volatile memory. Volatile memory is erased when you turn off your phone (or when the battery is drained). Non-volatile memory is not erased when your phone is turned off. On many phones, the volatile (non-permanent) memory is called *Main Memory* and the non-volatile (permanent) memory is called *Storage* or *IPSM*. When installing a PocketBible Bible, you may be asked to choose whether to install to *Main Memory*, *Storage*, or an external media card (such as an SD card) if one is inserted. If you install to Main Memory, then the Bible will be erased when your phone is turned off. Therefore, we recommend that you do not install to the volatile *Main Memory*.

Starting PocketBible

- Select Start to view the list of installed programs.
- Locate PocketBible in the list. (It may be necessary to scroll to another page.)
- Select PocketBible.

Quick Start Guide

Choosing Your Input Preference

PocketBible provides two different methods for data entry: Multitap and T9. The input method that you select affects the GoTo Form and the Find Form. Multitap is selected by default, but you can change to T9 if you prefer. To choose the method that you'd like to use:

1. Select the Menu
2. Select *Options*

3. Select *Navigation*
4. To use T9, check the *Use T9 for Input* box. To use Multitap, uncheck the *Use T9 for Input* box.
5. Press Done

[More T9 and Multitap details](#)

[More options](#)

Choose a Bible to View

1. Press the Menu button
2. Select *Select Bible*
3. Select the Bible that you'd like to view

Reading and Scrolling

PocketBible displays a page at a time; scroll through the Bible using the navigator pad on your phone. You can scroll by line or by page.

<i>Tap</i>	<i>To Scroll</i>
Left	Previous Page
Right	Next Page
Up	Previous link, or scroll up one line
Down	Next link, or scroll down one line

If the page contains a hyperlink, then Up/Down will scroll to the previous or next hyperlink. When there is not a previous or next hyperlink, then the page will scroll by a line.

[More navigation details](#)

Jump to a Different Verse

PocketBible provides two methods for jumping to a different verse in the Bible.

1. Use the GoTo Form to jump from any verse to any other verse.
2. Use keypad shortcuts to quickly jump to a different chapter or verse in the book of the Bible already shown.

The GoTo Form via the Location Button

The left context button shows the abbreviation of the open Bible and the location in the Bible. For instance, it might display "NASB: Jn 1:1", indicating that you are looking at Jn 1:1 in the NASB. This button is called the *Location Button*. Press the location button to change to a different location in the Bible. The GoTo Form will be displayed. Select the book, chapter and verse to view, then press Done.

[More GoTo details](#)

Keypad Shortcuts

Use keypad shortcuts to quickly jump to a different chapter or verse in the book of the Bible that you are currently reading. To jump to a different chapter and verse, press the chapter number(s), the # key, the verse number(s), and the OK/Action button. To jump to a different verse in the current chapter, press the verse number (s) and the OK/Action button. As you press the keypad, the new location is shown in the PocketBible title bar at the top of the screen. If you tap the wrong number, press the *back* button to erase the last number or key press.

For example, if you are currently reading John 3:16 and want to return to John 3:1, press *1 OK*. To go to John 1:14, press *1 # 1 4 OK*.

Keypad shortcuts have a timer, which will wait 2 seconds after you press a key and then attempt to jump to the location you specified. So, you can use the OK/Action button as mentioned above or just wait for the timer to expire. If you decide you don't want to change the location after you have entered a chapter or verse, repeatedly press the back key until the title bar returns to "PocketBible".

[More keypad shortcuts](#)

Find

Use Find to locate verses that contain a specific word, phrase, or combination of words. To start:

1. Press the Menu button
2. Select *Find*
3. Select *Find* from the popup menu

Specify what you are looking for in the Find Form.

1. In the Find field, enter the word, phrase, or combination of words that you are looking for.
2. Restrict the search to a portion of the Bible by entering a portion of the Bible to search. Leave blank to search the entire Bible. (If you know that you are interested in results only in a portion of the Bible, you can simplify navigating the results by limiting the find to that portion of the Bible.)
3. Or, select a pre-defined limit, such as the Old Testament or the New Testament in the Predefined field.
4. Press Done to start the Find.

Remember, if you are using T9, after you enter at least two letters, a potential match for what you've tapped will be shown. Just keep writing letters until the word you are looking for is shown. Press 0 repeatedly to cycle through the possible matches.

[More Find details](#)

Navigation

To scroll to the previous or next page, press Left or Right.

To scroll up or down by one line, press Up or Down. If there is a hyperlink above or below the current hyperlink, then that link will be activated. Otherwise, the page will scroll by one line.

To scroll to the previous or next hyperlink on this page, press Up or Down. If there is not a previous or next hyperlink, then the page will scroll by a line.

To view a different verse:

- Press the Location Button to access the GoTo Form, where you can select a different book of the Bible, a chapter and a verse

- Press the verse number(s) then OK to view a different verse in the current chapter
- Press the chapter number(s), then #, then the verse number(s), then OK to view a verse in another chapter of the book of the Bible
- Press * then Up to scroll to the previous chapter
- Press * then Down to scroll to the next chapter

To jump to the next Find match:

- Use the keypad shortcut, *2
- Select *Find | Next Match* from the menu

To jump to the previous Find match:

- Use the keypad shortcut, *1
- Select *Find | Previous Match* from the menu

To backup in the list of verses that have been viewed:

- Use the keypad shortcut *Left
- Select *Back* from the menu

To move forward in the list of verses that have been viewed:

- Use the keypad shortcut *Right
- Select *Forward* from the menu

To return to a bookmarked verse:

1. Press the Menu button
2. Select *Bookmarks*
3. Change the category, if necessary
4. Select the desired verse
5. Press Done

GoTo

To activate the GoTo feature, press the Location Button. The Location Button is the left context button, used to show the current location in the Bible. The GoTo

Form behaves differently depending upon whether you have selected Multitap or T9.

If you use Multitap input:

1. Select the desired book of the Bible from the displayed list. Scroll through the list with the left and right buttons. Press OK to view a full-screen list.
2. Press Down to move to the Chapter field, then enter the chapter number(s) using the keypad.
3. Press Down to move the Verse field, then enter the verse number(s) using the keypad.
4. Press Done.

If you use T9 input:

1. Start typing the name or abbreviation of the book of the Bible.
 - With each new tap, PocketBible will narrow down the book that you are writing.
 - Stop typing when the desired book name appears.
 - Press 0 repeatedly to cycle through the matches.
2. Press Down to move to the Chapter field, then enter the chapter number(s) using the keypad.
3. Press Down to move the Verse field, then enter the verse number(s) using the keypad.
4. Press Done.

Remember, you can also jump to a different chapter or verse within the currently displayed book of the Bible using [keypad shortcuts](#).

[More T9 and Multitap details](#)

The Bible Menu

The Bible menu is available when you are viewing a Bible. Press the Menu button to access the following menu choices.

Select Bible

Shows the list of installed Bibles. Select the Bible that you'd like to view.

PocketBible for your Windows Mobile Smartphone can be used with Bibles from Laridian. Visit the Laridian Web site (www.laridian.com) to learn more about the many available Bibles and other resources for your Smartphone.

Forward Back

PocketBible maintains a list of verses that you have recently viewed; you can navigate through this list using Forward and Back.

Verses are added to the list anytime that you jump to a new verse:

- Go to a new verse via the keypad shortcuts
- Go to a new verse via the GoTo Form
- Follow a hyperlink
- View a Find result
- Go to a bookmarked verse

Verses are not added to the list when you scroll by verse or page.

A simple example will help clarify how Forward and Back behave.

- You start PocketBible at Genesis 1:1.
- Then you jump to Matthew 1:1.
- Next you jump to Mark 1:1.
- Next you jump to Luke 1:1.
- Next you jump to John 1:1.
- Back returns to Luke 1:1.
- Another Back returns to Mark 1:1.
- Forward returns to Luke 1:1.
- Using Back you can eventually return all the way to Genesis 1:1.

Of course, this is a silly example. However, imagine that you are studying the Bible, following links, and jumping to related verses. As you move through the Bible, you can use Forward and Back to return to your original starting place, or to explore other related verses without losing your place.

Find | Find

Shows the Find Form. Use Find to locate verses that contain a specific word, phrase or combination of words. [More details](#)

Find | Show Find Results

Shows the results of the previous Find. Use the navigation pad (up, down, left, and right) to navigate through the list of verses that contain a match. Then press OK to view the selected verse in context. To return to the list of matches, simply select *Find | Show Find Results* from the menu again.

Find | Next Match

Turns to the next verse, after the verse that you are currently looking at, that contains a match.

Find | Previous Match

Turns to the previous verse, before the verse that you are currently looking at, that contains a match.

Find | Highlight Find Hits

When selected, PocketBible will highlight the matching word or phrase so that you can more easily see it within the verse. When not selected, PocketBible will not highlight the matching word or phrase.

Bookmarks

Shows the Bookmarks Form, where you can manage your bookmarks or jump to a bookmarked verse. [More details](#)

Options

Shows the Options Form, where you can configure PocketBible to best match your preferences. [More details](#)

Book Properties

Shows information about the Bible, including the version and copyright information.

About

Shows the PocketBible program version and copyright information.

Help

Shows this help information.

Find

Use Find to locate verses that contain a specific word, phrase or combination of words. To start a find, choose *Find / Find* from the menu.

1. In the Find field, enter the word, phrase, or combination of words that you are looking for.
2. Restrict the search to a portion of the Bible by entering a portion of the Bible to search. Leave blank to search the entire Bible. (If you know that you are interested in results only in a portion of the Bible, you can simplify navigating the results by limiting the find to that portion of the Bible.)
3. Or, select a pre-defined limit, such as the Old Testament or the New Testament in the Predefined field.
4. Press Done to start the Find.

Remember, if you are using T9, after you enter at least two letters, a potential match for what you've tapped will be shown. Just keep writing letters until the word you are looking for is shown. Press 0 to cycle through the possible matches.

[More T9 and Multitap details](#)

Find Example

The best way to understand how to enter searches is by example:

- **faith** finds all occurrences of the word "faith". Capitalization is ignored.

- **day of the lord** finds all occurrences of the phrase "day of the lord".
- **husband AND wife** (or **husband & wife**) finds all verses containing both the word "husband" and the word "wife". "AND" must be in all uppercase.
- **husband OR wife** (or **husband + wife**) finds all verses containing either the word "husband" or the word "wife" or both.
- **husband XOR wife** (or **husband ^ wife**) finds all verses containing either the word "husband" or the word "wife" *but not both*.
- **husband NOT wife** (or **husband # wife**) finds all verses containing the word "husband" that do *not* also contain the word "wife".
- **faith*** finds all occurrences of "faith", "faithful", "faithfulness" etc.
- **?aul** finds all occurrences of "Paul", "Saul", "haul" etc.
- **(jesus OR christ) AND (simon OR peter)** finds all verses in which Jesus and Peter are both mentioned, using either of the common names for each.

Results will be displayed in the "Find Results." Select a verse containing a match to view the verse in context. Matching words will be highlighted on the screen as long as *Find/Highlight Find Hits* is checked.

Find Words and Phrases

To find a word or phrase, just enter it in the Find Form. Examples:

- god
- faith
- Jesus Christ
- day of the lord

Note that capitalization is ignored, as is punctuation.

Entering Data with the Keypad

The Find Form supports two different methods of entering letters with your phone's keypad: Multitap and T9. Change the input method from T9 to Multitap, or from Multitap to T9, by selecting *Options / Navigation* from the menu.

To enter a word:

- Multitap: use the keypad to spell the word. Press the same key one, two, three or four times to write a letter represented on that key.
- T9: press a key on the keypad once for each letter in the word that you are spelling.

- Continue pressing keys until the correct word appears or you reach the end of the word.
- Press 0 repeatedly to cycle through the possible matches.

To enter a space:

- Press #

To enter capital letters:

- Press * to toggle caps on, locked, and off

To enter an asterisk (*):

- Multitap: press 1
- T9: press 1

To enter a question mark (?):

- Multitap: press 1 repeatedly until "?" is shown
- T9: press 1, then 0 repeatedly until "?" is shown

To enter an operator (such as AND or OR):

- Multitap: Press * to toggle caps lock on, then spell the operator such as AND or OR, then press * to turn caps lock off
- T9: press 1, then 0 repeatedly until the short form of the operator, such as & for AND or + for OR, is shown

To enter parenthesis:

- Multitap: press 1 repeatedly until "(" or ")" is shown
- T9: press 1, then 0 repeatedly until "(" or ")" is shown

[More T9 and Multitap details](#)

Find Using AND, OR, NOT and XOR

PocketBible supports AND, OR, NOT and XOR (exclusive OR) searches, as described below. Note that you can substitute *phrases* for any of the *words* used in the examples below.

AND (&)

To find all the verses in which the words "love" and "husband" appear, enter:

- love AND husband

It's important to enter AND in all uppercase. If you enter "love and husband" PocketBible will look for the *phrase* "love and husband." You can substitute the ampersand character (&) for AND.

OR (+)

To find all the verses in which either "love", "husband" *or both* appear, enter:

- love OR husband

Again, make sure OR is in uppercase. You can substitute the plus character (+) for OR.

XOR (^)

To find all the verses in which either "love" or "husband" *but not both* appear, enter:

- love XOR husband

You can substitute the caret character (^) for XOR.

NOT (#)

To find all the verses in which "love" appears but not "husband", enter:

- love NOT husband

You can substitute the number sign (or 'pound' or 'sharp') character (#) for NOT. Note that you cannot do a "unary NOT" operation (as in "NOT love" to find all verses that do not contain "love").

Complex Boolean Searches

AND, OR, XOR and NOT can be combined in one search. They are evaluated left to right. Example:

- jesus OR christ AND spirit

In this case, every verse containing "Jesus" or "Christ" is found, then those verses are searched for those that contain the word "spirit".

Parenthesis

Parenthesis can be used to change the order of evaluation:

- jesus OR (christ AND spirit)

This search finds all verses containing the word "Jesus" or both the words "Christ" and "spirit". In the non-parenthesized version of this search, every resulting verse must contain the word "spirit" but in by adding the parenthesis it's possible that some verses containing "Jesus" will not contain "spirit".

Wildcard Searches with * and ?

An asterisk (*) can be used anywhere in a word to match any number of letters. So:

- **bapt*** will match "baptist", "baptism", "baptize", etc.
- **p*I** matches "painful", "Paul", "pearl", etc.

A question mark (?) matches any single character. So:

- **?aul** matches "haul", "Paul" and "Saul".

Wildcard words can be used anywhere a word is used in any search, including within phrases.

Mixing Phrases, Wildcards and Boolean Operators

Some programs require quotation marks around the phrase or entering a special "phrase search" mode; PocketBible does not. You can use phrases (any sequence of words) anywhere without any special punctuation. You can use wild card characters in phrases.

- jesus christ AND son of god
- holy spirit* AND bap^t* AND (in OR with)

Limiting Searches to Specific Passages

You can limit searches to a simple or complex range of verses by entering references in the **In verses** box on the Find Form. Search limits can be as simple as "John" to find your word(s) or phrase(s) in the Gospel of John or as complex as "Mat 5-7;John 15,16" to search only these five chapters in Matthew and John.

Note that Bibles published for PocketBible contain the full "Front Matter" and "Back Matter" that are included in printed Bibles (such as a preface or introduction from the translators). Your searches will include these sections of the Bible unless you explicitly exclude them (generally by limiting your searches to "Gen-Rev").

Also note that the In Verses field always uses Multitap. Press the keypad multiple times as needed to enter a specific letter or number.

Predefined Limits

For simplicity of searching, certain verse ranges are predefined in every Bible. The **Predefined** field lists "OT" (Old Testament), "NT" (New Testament) and "Bible" (entire Bible, excluding Front Matter and Back Matter). Some Bibles may give you other predefined search limit options.

Bookmarks

PocketBible allows you to bookmark and categorize your favorite passages. Access the bookmark features by selecting *Bookmarks* from the menu. Note that bookmarks are shared by all Bibles. When you add a bookmark in one Bible, such as the NIV, that bookmark will also be available in your other Bibles, such as the NKJV and the NASB.

View a Bookmark

Select *Bookmarks* from the menu to view the list of bookmarks. The resulting will list will show either all bookmarks, or only those bookmarks in a selected

category. To show only the bookmarks in a specific category, press the Menu button, then select *Categories*.

To view the verse in context, select the verse, then press *OK* or the *Done* button.

Add a Bookmark

To add a bookmark:

1. Go to the verse that you want to bookmark. Watch the verse reference in the Location button; scroll up and down until the desired verse reference is shown.
2. Press the Menu button.
3. Select *Bookmarks*.
4. In the resulting list, press the Menu button.
5. Select *Add*.
6. Verify that the desired reference is shown (press *Change Location* if it is not).
7. Select the desired category.
8. Press Done.

Remove a Bookmark

To remove a previously added bookmark:

1. Press the Menu button.
2. Select *Bookmarks*.
3. Select the bookmark that you'd like to remove. Change the category, if necessary.
4. Press the Menu button.
5. Select *Delete*.

Using Bookmark Categories

Each bookmark can be assigned a specific category. Use categories to help organize your bookmarks. Here are some examples.

If you are memorizing Scripture and want to review different verses on different days of the week, create categories named for days of the week (*Monday*, *Tuesday*, *Wednesday*, etc.). For verses that you'd like to review Monday, add a bookmark in the Monday category.

If you are studying the fruits of the Spirit, and want to refer to other verses related to the characteristic, create categories *Love, Joy, Peace*, etc. As you find a related verse, add a bookmark with the appropriate category.

Changing Bookmark Categories

To add a bookmark category:

1. Press the Menu button.
2. Select *Bookmarks*.
3. Press the Menu button.
4. Select *Categories*.
5. Press the Menu button.
6. Select *Add*.

To delete an existing category.

1. Press the Menu button.
2. Select *Bookmarks*.
3. Press the Menu button.
4. Select *Categories*.
5. Select the category to be deleted.
6. Press the Menu button.
7. Select *Delete*.

Deleting a category does not delete the bookmarks in that category. Any bookmark in that category is recategorized into "No Category".

Options

Select *Options* from the menu to adjust the PocketBible options.

Appearance

Font size

Select the size of the text. 1 is smallest and 7 is largest. The default size is 3.

Christ's words in red?

Check the *Red Letters* box to display the words of Christ in red. *Red Letters* is checked by default.

Indent poetry?

Check the *Indent* box to indent poetry, formatting the poetry as it appears in many printed Bibles. *Indent* is checked by default.

Footnotes

Select how you want footnotes to be handled. The default setting is On.

Some Bibles contain translator's notes and cross references to other passages. These are included as notes. Select from the following options.

- On - displays footnote markers, but does not expand the note. Select the footnote marker, then press OK to expand the note.
- Expand - expand all notes so that the notes are interspersed amidst the Bible text.
- Off - hide all note markers; with this setting notes will not be seen.

Navigation

T9 or Multitap input?

Check *Use T9 for Input* if you prefer to use T9. Uncheck to use Multitap. This setting affects input in the GoTo Form and the Find Form. Multitap is selected by default. [More T9 and Multitap details](#)

Accept book abbreviations?

Check *Use abbreviations* to use common abbreviations for books of the Bible, such as *Jn* for John and *Ex* for Exodus, when entering a book in the GoTo Form using T9. This option doesn't have any affect if the T9 box (above) is not checked. *Use abbreviations* is checked by default.

Show books in alphabetical or biblical order?

This option affects whether the book list in the GoTo Form sorts the books of the Bible alphabetically or in biblical order. Check *Alphabetical* to sort the books of the Bible alphabetically, instead of in biblical order. *Alphabetical* is not checked by default.

Miscellaneous

Select book by abbreviation or full name?

Check *Abbreviation* if you prefer to select a Bible by its common abbreviation (such as *NIV*) instead of its full name (such as *The Holy Bible: New International Version*). Since the screen on your Smartphone is not very wide, book abbreviations are used by default.

Display exit in menu?

Your Windows Mobile Smartphone provides advanced memory management features to automatically close programs in the background when more resources are needed by the program you are currently using. Therefore, Microsoft recommends that programs not include Exit or Quit in the menu. However, we at Laridian prefer being able to exit whenever we want. You may prefer that also. If so, check the *Show exit* box.

Delay for flash power-up?

Some Smartphones contain power management features that dim the screen, turn off the screen, and reduce or turn off power to other electronic components. When the phone resumes from this idle state, some external flash memory cards (such as SD cards) do not power-up as quickly as the phone. If PocketBible immediately tries to read data from a book stored on a card, it may appear that the card is not available when in fact it simply has not returned to complete operating status yet. The *Delay for flash power-up* option attempts to compensate for this power-up delay. If you return to using PocketBible after your phone has been idle and you receive an error, try checking the *Delay for power-up* box.

If the problem persists even with this box checked, simply exit PocketBible (press *0) and restart it. PocketBible will restart at your previous location.

Debug

The Debug options are used to control the built-in diagnostic features of

PocketBible. You will typically only need to change these if instructed by Laridian technical support staff.

Show Diagnostics

Check *Show Diagnostics* to turn on the diagnostic features of PocketBible. When checked, PocketBible will include diagnostic information when showing the book's properties. Select *Book Properties* from the menu to view the diagnostic information. *Diagnostics* is off by default.

Logging

PocketBible can create a log file containing information about its operation. The log file is named *PocketBible Smartphone_log.txt* and is stored in the folder that contains the PocketBible program. This is typically *Program Files \ PocketBible* in the appropriate memory card.

Several logging settings are available. The default setting is Off.

- Off - logging is turned off
- Fatal - detected fatal errors are logged
- Error+ - errors are logged
- Warn+ - warnings are logged
- Info+ - information dialogs are logged
- All - all logging is enabled

Each setting includes the setting listed above it. For instance, the Warn+ setting includes warnings, errors, and fatal errors. The All setting is the most verbose.

Note that the log file is erased each time that PocketBible starts. This prevents the file from growing to an unreasonable size, but also means that you must make a copy of a log file that you'd like to keep before you restart PocketBible.

Finally, the logging setting does not take effect until you exit PocketBible and restart it. After saving your changes, press *0 to exit PocketBible.

T9 and Multitap

PocketBible supports both Multitap and T9. To select either Multitap or T9 as your preferred choice, choose *Options / Navigation* from the menu.

Multitap

What is Multitap?

Multitap uses the phone's keypad to input text. Each digit on the keypad is used to choose between one or more letters, number of punctuation. For instance, the 2 key is used to select either *a*, *b*, *c*, or *2*. Press 2 once to enter an *a*, twice to enter a *b*, three times to enter a *c*, or four times to enter a *2*. Writing a five-letter word could take as few as five taps, or as many as 20 taps. For example, to write the word *James*, you would enter *5, 2, 6, 33, 7777*.

Multitap Examples

Example 1: to enter "love" in the Find Form:

1. Press *555* for "l"
2. Press *666* for "o"
3. Press *888* for "v"
4. Press *33* for "e"

Example 2: to enter "lo*" in the Find Form:

1. Press *555* for "l"
2. Press *666* for "o"
3. Press *1* repeatedly until "*" is shown

T9

What is T9?

T9 also uses the phone's keypad to input text. However, unlike Multitap, T9 attempts to use only one key press for each letter. As you tap keys, PocketBible determines the combination of letters that you could be entering, and then uses the vocabulary of the book to make a guess about the word that you are entering. The more numbers that you type, the smaller the list of possible matches becomes. The 0 key is used to cycle through the possible matches. For instance, if you press *2, 2, 8*, you might be writing *act*, *bat* or *cat*. If T9 guesses *act*, but you

intend to write *cat*, tap the 0 to cycle through the available matches until *cat* appears.

T9 Examples

Example 1: to enter "love" in the Find Form:

1. Press 5 for "l"
2. Press 6 for "o"
3. Press 8 for "v"
4. Press 3 for "e"
5. Press 0 repeatedly until "love" appears

Example 2: to enter "lo*" in the Find Form:

1. Press 5, then 0 repeatedly until "l" is shown
2. Press 6, then 0 repeatedly until "o" is shown
3. Press 1, then 0 repeatedly until "*" is shown

Example 3: to enter "John" in the GoTo Form, tap 5, 6, 4, 6.

<i>Press</i>	<i>You'll See</i>
5	James
6	Jms
4	Jnh
6	John

Hint: If "John" is not shown after entering 5, 6, 4, 6, press 0 repeatedly until "John" is shown.

Hints

- To enter a space, press #.
- To enter capital letters, press * to toggle between lower-case, upper-case, and caps lock.

- When using T9, press 0 repeatedly to cycle through possible matches.
- When using T9, press 1 and then 0 repeatedly to access any available special characters.
- When using Multitap, press 1 repeatedly to access any available special characters.

Keypad Shortcuts

Use the following keypad shortcuts when reading the Bible.

<i>Press</i>	<i>Action</i>
Up	Previous hyperlink or line up
Down	Next hyperlink or line down
Left	Page up
Right	Page down
* Up	Previous chapter
* Down	Next chapter
* Left	Back
* Right	Forward
* 1	Previous Find match
* 2	Next Find match
* 0	Exit

Use the keypad to jump to a different location in the displayed book of the Bible.

0-9	Enter chapter or verse
#	Separate chapter and verse
OK	GoTo entered chapter : verse
Back	Erase the previous entry

For example, if you are currently reading John 3:16 and want to return to John 3:1, press *1 OK*. To go to John 1:14, press *1 # 1 4 OK*.

Using Copyrighted Material

Most of the Bibles and related reference material available for PocketBible are protected by US and International copyright laws. To find complete copyright information on any Bible or book:

1. Press the Menu button
2. Select *Book Properties*

First and most important, you cannot give or sell copies of PocketBible or any of its copyrighted books to other people; nor can you install PocketBible or any of its copyrighted books on more than one computer at a time. You *can* keep a backup copy of the setup and installation files on your desktop computer.

Second, if you copy text out of any of the copyrighted books that are sold with PocketBible, you may be subject to limits that are set by the copyright holders. If you have any doubts, contact the copyright holder named in the copyright statement. Do not contact Laridian for permission to quote from Bible text. You must contact the copyright holder directly.

Generally, you can use any copyrighted material for your own personal use and for certain educational uses. But even educational use does not permit unlimited copying. Contact the copyright holder if you need to quote extensively from copyrighted material.

Laridian's No-Nonsense License Agreement

We're not lawyers and neither are most of you. By installing this software, you agree to the following no-nonsense agreement.

You understand that you're not purchasing any rights in the software itself but rather a license to use the software on one and only one computer. Additional installations require the purchase of additional copies of the program and/or data files.

You agree not to give away, sell or otherwise transfer copies of this program or its associated data files to any other party for any reason. When you upgrade the program or the data files, your license to use the older versions terminates. You can not legally give old copies of the program away.

The previous paragraph is not intended to prevent you from transferring your ownership of your single copy of the program to another individual, as long as you destroy all your copies of the program and/or data and the new owner agrees with the terms of this agreement and notifies Laridian of the transfer of ownership. We acknowledge your right to keep a backup copy of these files for archival purposes only.

You agree that using software of any kind from any company is a risky activity. You will not hold us liable for any loss of time, money, data files, etc. that might be caused by using this program. This is not to say that we expect this to happen; just that you're responsible for backing up your important files and operating your computer with care. Our obligation to you under any and all circumstances is limited to replacing products you've purchased from us that become damaged or lost because of something we did, or refunding your purchase price at our discretion.

If You Need Additional Assistance

If you need additional assistance, visit the Support Helpdesk at the Laridian Web site, www.laridian.com. Follow the Technical Support or Helpdesk links. The Support Helpdesk allows you to browse and search the KnowledgeBase of questions and answers related to Laridian products. If you don't find what you're

looking for in the KnowledgeBase, you can also use the Helpdesk to submit a trouble ticket, allowing our support technicians to answer your question or help resolve your problem.

Telephone support is also available. To contact us by phone, go to the Support Helpdesk and search the Knowledge Base for "phone number". The resulting article will provide our phone number and hours of operation.
